

12-core fiber optic splice tray for campus network use

Article Overview

A 12-core fiber optic splice tray is designed to organize, protect, and manage up to 12 fiber splices, ensuring signal integrity and efficient cable management in campus networks.

Overview and Purpose

A 12-core fiber optic splice tray provides a secure location for storing and protecting optical fibers and their splices. It is commonly used in fiber distribution frames, junction boxes, and wall-mounted enclosures along campus network routes, at intermediate points, or at termination and patch panel locations . These trays help prevent fiber bending, tension, and environmental damage, maintaining signal quality and network reliability .

Key Features

- Capacity: Holds up to 12 fiber splices, with the ability to stack multiple trays for higher fiber counts .
- Fiber Protection: Built-in fiber management paths maintain proper bend radius and prevent micro-bending losses .
- Material: Made from flame-retardant, impact-resistant materials for long-term durability .
- Connector Compatibility: Supports SC/APC connectors with angled physical contact to reduce back reflection and improve signal quality
