

# 304 Stainless Steel Cable Tray Trough Type

## Article Overview

304 stainless steel trough-type cable trays offer durable, corrosion-resistant cable management suitable for industrial and commercial applications.

### Material and Construction

304 stainless steel cable trays are made from AISI Type 304 stainless steel, providing excellent corrosion resistance, durability, and long-term performance in indoor and outdoor environments . Trough-type trays feature a solid or ventilated bottom welded to side rails, forming a rigid structure that supports heavy cable loads . Hardware and welding components are typically made from Type 316 stainless steel to ensure strength and corrosion resistance at joints .

### Design and Dimensions

Trough-type cable trays are available in light, medium, and heavy-duty ranges, with standard widths from 50 mm to 900 mm and lengths of 10, 12, 20, or 24 feet . Rungs or transverse members are welded to the side rails, with spacing options of 6, 9, or 12 inches, capable of supporting concentrated loads of up to 200 lbs per rung with a safety factor of 1.5 . Radiused fittings follow industry-standard spacing to maintain structural integrity.
