

6060 Cable Tray Installation

Article Overview

6060 cable trays can be installed efficiently by following NEC guidelines, manufacturer specifications, and proper material selection to ensure safety, accessibility, and long-term reliability.

Material Selection and Tray Type

6060 cable trays are typically steel wire mesh trays, offering high strength and corrosion resistance. They may come in aluminum, stainless steel, or FRP (fiberglass reinforced polyester) depending on environmental conditions. Aluminum provides excellent corrosion resistance, while stainless steel (AISI 316L) is ideal for highly corrosive environments. FRP trays offer a high strength-to-weight ratio and are suitable for chemical or wet environments. Choose the tray material based on load requirements, exposure to moisture, and potential chemical exposure.

NEC Compliance and Safety Guidelines

According to NEC Article 392, key installation rules include :

- Cable Types: Use only conductors rated for open-air environments, such as Tray Rated (Type TC) or Metal-Clad (Type MC) cables.
- Clearances: Maintain at least 12 inches of vertical clearance above trays for installation and maintenance access.
- Prohibited Areas: Do not install trays in hoistways or enclosed spaces; trays must remain accessible.
- Grounding: Metallic trays can serve as equipment grounding conductors if they m...
