

A complete set of 12 circuits for a household electrical distribution box

Article Overview

A 12-circuit household distribution box safely manages power distribution for multiple home circuits, providing overload and short-circuit protection while allowing organized wiring.

Overview

A 12-way distribution box (also called a consumer unit or electrical panel) is designed to split the main power supply into up to 12 individual circuits, each protected by a miniature circuit breaker (MCB) or similar device . These boxes serve as the central hub for your home's electrical system, ensuring safety and efficient power management .

Key Features

- **Material and Build:** Commonly made from CRCA sheet steel with a powder-coated finish for durability and corrosion resistance, or ABS plastic for waterproof and insulated designs suitable for indoor/outdoor use .
- **Protection:** Equipped with overload and short-circuit protection, often including surge protection devices (SPD) and proper earthing to prevent electrical hazards .
- **Accessibility:** Transparent or opaque front covers allow monitoring of breaker status without opening the box .
- **Modular Design:** Slots are arranged to accommodate MCBs, RCBOs, or other modular protection devices, simplifying wiring and maintenance
