

ASEAN Galvanized Cable Tray Models

Article Overview

Galvanized cable trays in ASEAN typically follow NEMA VE-1 or equivalent IEC standards, with hot-dip or pre-galvanized finishes, standard dimensions, and a range of accessories for installation.

Material and Finish

Galvanized cable trays are generally fabricated from prime quality steel sheet and protected against corrosion using hot-dip galvanization, pre-galvanized steel, or electro powder coating . These finishes ensure durability in humid or industrial environments common in ASEAN countries.

Standards Compliance

- NEMA VE-1: Widely referenced for metallic cable trays, covering mechanical strength, load ratings, and construction .
- IEC equivalents: International standards for electrical installations, often used alongside NEMA for regional compliance .
- TCVN 197-2002: Vietnamese standard referenced by some manufacturers for local compliance .

Dimensions

Cable trays are available in a variety of lengths, widths, and heights to accommodate different cable loads and installation requirements :....
