

Access Switch Setup

Article Overview

Setting up an access switch involves connecting to the device, configuring basic parameters, securing access, assigning VLANs, and enabling management interfaces for network integration.

Step 1: Inspect and Connect Hardware

Before configuration, check the switch hardware for any damage, ensure all cables are properly connected, and power on the device. Verify that the system and port LEDs indicate normal operation (green for operational, blinking green for software loading) . Connect to the switch via the console port using a terminal emulator like PuTTY, selecting a 9600 baud serial connection .

Step 2: Enter Privileged EXEC Mode

At the console prompt, type enable to enter Privileged EXEC mode (Switch#). This mode allows you to execute configuration commands .

Step 3: Set Hostname and Domain

Assign a hostname to identify the switch in the network:

```
Switch(config)# hostname AccessSwitch1
```

Optionally, set a domain name for SSH and certificate purposes .

Step 4: Configure Passwords and Access Security...
