

African confluence bridge

Article Overview

The African confluence bridge, known as the Kazungula Bridge, spans the Zambezi River at the Kazungula Quadripoint, connecting Botswana and Zambia and enhancing regional trade.

Location and Geographic Significance

The Kazungula Bridge is situated at the confluence of the Zambezi and Chobe Rivers in southern Africa, near the unique Kazungula Quadripoint, where the borders of Botswana, Zambia, Zimbabwe, and Namibia converge . This location is one of the few places in the world where four countries meet at a single point, making it a geographic and strategic landmark .

Construction and Features

The bridge is a 923-meter-long engineering marvel that replaced the older ferry system, which was often unreliable due to seasonal river conditions . Construction was completed in 2021, with a total cost of approximately \$260 million, financed collaboratively by Botswana, Zambia, and the African Development Bank . The bridge includes a road component for vehicles, while a railway line is still under construction, further enhancing its role in regional transport .

Economic and Regional Impact

The Kazungula Bridge serves as a critical artery for trade and transport in southern Africa, particularly under the African Continental Free Trade Area (AfCFTA) framework...
