

Alarm equipment for distribution boxes

Article Overview

Alarmed distribution boxes integrate physical intrusion detection and smart monitoring to secure and manage electrical or classified network systems.

Overview of Alarmed Distribution Solutions

Modern alarm devices for distribution boxes combine physical security, real-time monitoring, and automated alerts. These systems are designed to detect unauthorized access, tampering, or environmental anomalies, ensuring both operational safety and compliance with security standards .

Physical Intrusion Detection

- Holocom Alarmed PDS (A-PDS): Uses fiber optic sensors to detect tampering or intrusion into network enclosures and raceways. It can be installed in hardened carriers, EMT, or armored interlocking fiber, providing Layer 1 network security for classified networks like SIPRNet .
- INTERCEPTOR NX: Designed for U.S. Federal and Military applications, this system replaces daily visual inspections with automated 24/7 monitoring, detecting open/closed events in lock boxes, maintenance holes, and other critical points. It ensures compliance with CNSSI 7003 standards and supports CORA assessments .

Smart Monitoring and Remote Management

- IoT-enabled distribution boxes: Equipped with sensors to track voltage, current, power consumption, and temperature in real time. These systems can detect faults...
