

# Asian Distribution Box Size Standards

## Article Overview

In Asia, standard distribution boxes are designed to fit 1100×1100 mm pallets, with maximum manual handling dimensions typically 800×400×350 mm and weight limits around 15–20 kg.

### Pallet and Box Standards

The ISO-recommended pallet for Asia-Pacific markets is 1100×1100 mm, widely used in Japan (JIS Z 0601), Korea, and China. This square pallet footprint allows four pallets per layer in a standard 20ft shipping container, optimizing container space and cargo density. Maximum pallet height is generally 180 cm, with a weight limit of 1000 kg per pallet. Boxes intended for these pallets should consider ergonomics and handling limits. The maximum manual handling dimensions for individual boxes are typically 800 mm (length) × 400 mm (width) × 350 mm (height), with a gross weight of 15 kg, though 20 kg may be allowed if agreed with the receiving plant. Grip holes are optional but recommended for expendable packaging to facilitate handling.

### Packaging Guidelines

Suppliers must comply with regional packaging guidelines, which align with global logistics standards. Key considerations include:

- Pallet footprint and height: 134–144 mm for standard pallets, 150 mm for plastic pallets.
- Protection measures: Use desiccants, VCI films, cushion foam (PE, PU), and angle protectors depending on product fragility....
