

Black putty for optical cables

Article Overview

Non-hardening black putty is ideal for sealing, insulating, and protecting optical cables from moisture, corrosion, and electrical leakage.

Overview

Black putty designed for optical and electrical cables is typically soft, flexible, and non-hardening, allowing it to conform to irregular shapes and maintain a seal over time without cracking or shrinking. It is used to block and fill cable joints, couplers, junction boxes, and glands, providing protection against dampness and preventing short circuits or corrosion of contacts in industrial environments .

Key Properties

- Non-hardening and flexible: Remains soft and moldable, making it easy to apply and remove if necessary .
- Chemical resistance: Resistant to oils, detergents, grease, water, caustic soda, petrol, alcohols, and mild acids, ensuring durability in harsh environments .
- Temperature tolerance: Typically functional in a range from approximately -20°C to 85°C, suitable for most indoor and outdoor cable installations .
- Electrical insulation: Prevents electrical leakage and short circuits, which is critical for sensitive optical and electrical systems .

Applications

- Sealing and insulating optical fiber splices and joints....
