

Brunei Temperature Sensing Cable Terminal Box

Article Overview

Temperature sensing cable terminal boxes in Brunei are available for both hazardous and non-hazardous areas, with options for integrated sensors, thermostats, and heat tracing connections.

Overview

Temperature sensing cable terminal boxes are designed to monitor and control the temperature of electrical connections and heat tracing systems. They are commonly used in industrial settings to prevent overheating, ensure safety, and maintain operational efficiency. These boxes can include temperature sensors mounted on wire ends, control modules, and remote monitoring capabilities, allowing real-time temperature tracking even from a separate computer system .

Types and Features

- **Hazardous Area Terminal Boxes:** Certified for installation in explosive or high-risk environments, these boxes are available in Ex e (increased safety) and Ex d (flameproof) designs. They provide secure energy distribution and protection against fire hazards .
- **Non-Hazardous Commercial Junction Boxes:** Products like the CMCT thermostat junction box allow direct termination of power and heat tracing cables, with inbuilt thermostats for local temperature control. They support multiple heat tracing cables and a single power cable, with a maximum load of 20 Amps
