

CE Certified Flame Retardant Cabinets

Article Overview

CE-certified flame retardant cabinets provide 90-minute fire resistance for safe storage of hazardous and flammable materials, complying with EN 14470-1 standards.

Key Features

Fire Resistance and Certification: CE-certified flame retardant cabinets are tested according to EN 14470-1, ensuring they can withstand fire for up to 90 minutes, giving personnel time to evacuate and firefighters time to respond safely . The fire resistance is verified in specialized fire chambers, measuring the temperature rise inside the cabinet to classify it as Type 30, 60, or 90 . **Construction:** These cabinets typically feature double-walled steel construction with fire insulation between the sheets, enhancing thermal protection and preventing rapid heat penetration . The interior often includes chemical-resistant plastic trays or steel sump trays to contain spills, with load capacities ranging from 150 kg per tray and collection capacities up to 55 liters . **Safety Mechanisms:** CE-certified cabinets include self-closing doors, profile cylinder locks, and automatic door closure in case of fire to limit oxygen entry and prevent flame propagation . Some models integrate smoke and temperature detectors, audiovisual alarms, and connections to fire control systems for enhanced safety . **Ventilation and Customization:** Many cabinets offer intake and exhaust openings, optional fans, and active ventilation systems to prevent accumulation of flammable vapors . Shelves are often adjustable or sliding, allowing customization for different storage needs, including chemical bottles, compressed gas cylinders, or battery charging lockers . **Applications:** These cabinets are suitable for laboratories, industrial facilities, offices, and outdoor storage of flammable or hazardous material...
