

CIF Price of Nigerian Exported Solar Communication System with Remote Monitoring Function

Article Overview

The CIF price for Nigerian-exported solar communication systems with remote monitoring is estimated to be 40–60% lower than imported proprietary systems, with local units potentially costing between \$500 and \$1,200 per system depending on scale and specifications.

Cost Factors

Local fabrication reduces costs significantly: Nigerian prototypes using ESP32 microcontrollers, voltage/temperature sensors, GSM/4G modules, and low-cost dashboards have been shown to cost 40–60% less than imported systems while maintaining reliable performance and low power consumption . Components such as ESP32 boards and INA219 sensors are readily available in Lagos, Abuja, and Port Harcourt markets, which further lowers procurement costs . System scale and functionality: Small to medium-scale solar systems with remote monitoring typically include PV panels, batteries, inverters, and IoT-enabled monitoring units. The CIF price will vary depending on the capacity of the solar system, the number of sensors, and the complexity of the remote monitoring dashboard . Shipping and insurance: CIF pricing includes the cost of goods, insurance, and freight to the destination port. For Nigerian exports, shipping from Lagos or Port Harcourt to major international ports in Europe, Asia, or the Americas can add \$100–\$300 per unit depending on volume, shipping method, and insurance coverage ...
