

Cable tray cover plate converted into a storage rack

Article Overview

A cable tray cover plate can be repurposed into a storage rack by reinforcing it, adding mounting supports, and configuring it for vertical or horizontal storage.

Material Considerations

Cable tray covers are typically made from aluminum, steel, or coated sheet metal, designed to protect cables from environmental exposure and mechanical damage . Their flat or corrugated design provides a lightweight yet rigid surface, which can be leveraged for storage purposes. Flat covers are easier to adapt for shelving, while corrugated or peaked covers may require additional support to prevent bending under load .

Structural Modifications

- **Reinforcement:** To support weight, consider adding angle brackets, steel strips, or wooden slats underneath the cover plate. Corrugated designs may already have some rigidity, but reinforcement ensures stability for heavier items.
- **Mounting:** Decide whether the rack will be wall-mounted, freestanding, or suspended. Wall-mounted racks can use L-brackets or cleats, while freestanding racks may require a frame made from metal tubing or wood.
- **Cutting and Bending:** If the cover plate is too long or wide, it can be cut with a metal saw or shears and edges bent to form lips or dividers for better storage containment
