

Cable tray cover used as shelving

Article Overview

Cable tray covers can be repurposed as modular shelving, offering a sustainable and adjustable storage solution.

Overview

Cable tray covers, typically designed to protect and organize electrical cables, are made from durable materials such as metal, PVC, or composite sheets . Their inherent strength, flat or corrugated surfaces, and modular dimensions make them suitable for shelving applications, especially in workshops, garages, or industrial-style interiors.

Practical Considerations

- **Material and Strength:** Metal covers (aluminum or steel) provide high load-bearing capacity, while PVC or composite covers are lighter but may support only lighter items . Corrugated or finned designs add structural rigidity without excessive weight.
- **Mounting:** Shelving can be created by suspending covers using threaded rods, brackets, or wall-mounted supports. Modular systems allow adjustment of shelf height and width .
- **Design Flexibility:** Flat covers are ideal for straight, uniform shelves, while dome or peaked covers can add visual interest or prevent accumulation of dust and debris .
- **Sustainability:** Repurposing decommissioned cable trays and covers reduces waste and supports circular economy principles, extending the lifespan of materials that would otherwise be recycled as scrap
