

Cable tray made of plastic boxes

Article Overview

Plastic cable trays, typically made from PVC or FRP, offer lightweight, corrosion-resistant, and non-conductive solutions for organizing and supporting electrical and data cables.

Materials and Types

Plastic cable trays are commonly made from polyvinyl chloride (PVC) or fiberglass reinforced plastic (FRP). PVC trays are lightweight, durable, and resistant to moisture and chemicals, making them suitable for indoor and outdoor installations, including industrial and telecommunications environments . FRP trays combine glass fibers with resin, providing high tensile strength, excellent load-bearing capacity, and fire resistance, ideal for heavy-duty or chemical-exposed applications . Plastic cable trays come in various forms:

- Solid-bottom trays for full cable protection.
- Slot-punched trays for ventilation and easy cable entry .
- Ladder-style trays (FRP) for large-diameter cables and heat dissipation .
- Box-type modular trays with covers for organized cable routing and safety .

Advantages

Plastic cable trays offer several benefits over traditional metal trays:

- **Corrosion resistance:** They withstand moisture, chemicals, and outdoor conditions without rusting
