

# Cable trays are connected across the connecting plate

## Overview

Splice plates are the most widely used method for connecting cable tray sections in straight runs. We fix them with nuts and bolts through the holes in the plate and the tray sides. Choosing the right one depends on project conditions, loads as grounding conductor equipment. In accordance with National Electrical Code (NEC) Article 392 "Cable trays" first determine the Maximum Fuse Ampere Rating or Circuit Breaker Ampere Trip Setting or Circuit Breaker Protective Relay Ampere Trip Setting for Ground-Fault Protection as the minimum. Then completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is erect the minimum bend radius for cables as they exit the bottom of the cable tray. These systems, made from metal or plastic, are open structures designed to support electrical conductors, ensuring proper organization and safety. Our knowledgeable production team works closely with each customer to provide quality solutions based on your schedule and budget.
