

Cable trays on top of the server rack

Article Overview

Cable trays can be safely mounted on top of server racks using dedicated top-mounted troughs or overhead runway kits, ensuring proper cable routing, load support, and airflow management.

Top-Mounted Cable Troughs

Top-mounted cable troughs, such as the Great Lakes TCT series or SmartRack SRCABLETRAY, attach directly to the top of server racks without requiring changes to overhead infrastructure. These trays provide a dedicated path for cables, reducing stress and tangling while keeping cables organized outside the enclosure. Many models offer toolless mounting and include grounding studs to connect to the rack and facility ground, ensuring electrical safety.

Types of Cable Trays

- Wire Mesh Trays: Ideal for data cabling, offering ventilation and flexibility for frequent cable changes.
- Ladder Trays: Provide high load capacity for heavier cable bundles, often used alongside wire mesh trays to separate power and data lines.
- Perforated Trays: Balance protection and airflow, suitable for controlled environments.
- Solid Trays: Fully enclosed, offering maximum protection but can restrict airflow and are less common in server rooms.

Installation Considerations...
