

Can a Huijue PoE switch be connected to another switch

Article Overview

Yes, a Huijue PoE switch can be connected to another switch, either PoE or non-PoE, using standard Ethernet connections, with attention to port types and power considerations.

Connecting to a Non-PoE Switch

A PoE switch like the Huijue can function as a regular network switch when connected to a conventional (non-PoE) switch. You simply use standard Ethernet cables to link the switches. The PoE switch will still provide data connectivity, but the non-PoE switch cannot receive power from the PoE switch. If you need to power devices connected to the non-PoE switch, a PoE injector can be used to add power to individual cables .

Connecting to Another PoE Switch

Two PoE switches can be connected together, commonly through their uplink ports or standard ports if the switches support auto-MDI/MDI-X. This allows both data transfer and power distribution to connected devices. Key considerations include:

- PoE Standards: Ensure both switches support compatible PoE standards (e.g., IEEE 802.3af or 802.3at) to avoid overloading devices .
- Power Budget: Check the total PoE power capacity of each switch to ensure connected devices receive sufficient power without exceeding limits
