

Can two routers be connected to a fiber optic broadband connection

Article Overview

Yes, a router can be connected to a fiber optic broadband connection, but it requires an Optical Network Terminal (ONT) to convert the fiber signal into a format the router can use.

How It Works

Fiber optic internet transmits data as light signals through thin glass or plastic fibers, which cannot be directly interpreted by standard routers. To bridge this gap, an Optical Network Terminal (ONT) is installed by your Internet Service Provider (ISP). The ONT converts the incoming optical signals into electrical signals via an Ethernet output, which can then be connected to your router's WAN port using a standard Ethernet cable .

Router Requirements

Not all routers are compatible with fiber connections. To ensure proper functionality:

- The router should have a Gigabit Ethernet WAN port to handle high-speed data from the ONT .
- Modern routers with Wi-Fi 6 or 6E are recommended to fully utilize fiber speeds, especially for plans exceeding 1 Gbps .
- Routers designed for DSL or cable (using phone line or coaxial inputs) will not work directly with fiber
