

# Certified Core Switch 100G

## Article Overview

100G core switches are high-performance, enterprise-grade networking devices designed for data centers and large-scale networks, offering ultra-fast throughput, high port density, and advanced reliability features.

### Overview

Certified 100G core switches are engineered to handle high-bandwidth traffic in enterprise networks, cloud infrastructures, and data centers. They support scalable network growth, low latency, and high availability, making them ideal for modern high-speed networking environments . These switches often integrate QSFP28 ports for 100G connectivity and are backward compatible with 10G and 25G SFP devices .

### Key Features

- **High Switching Capacity:** Many 100G switches offer 1.2-1.92 Tbps switching capacity, supporting dense traffic scenarios without packet loss .
- **Port Density:** Typical configurations include multiple 100G QSFP28 ports alongside 25G or 10G SFP ports, allowing flexible network design .
- **Reliability and Redundancy:** Hot-swappable power supplies and fans, modular design, and overvoltage protection ensure continuous operation and minimal downtime .
- **Advanced Networking Support:** Features like MLAG, VxLAN, EVPN, PFC, ECN, and SDN compatibility enable virtualization, traffic optimization, and centralized management .
- **Energy Efficiency:** Modern 100G switches reduce power consumption by up to 30...
