

Congo Solution Active Optical Device 1G

Article Overview

The Congo Solution Active Optical Device 1G refers to a 1-gigabit SFP transceiver used for optical or copper network connections, supporting high-speed data transmission and monitoring features.

Overview

The device is a 1G SFP (Small Form-factor Pluggable) transceiver, designed to connect network equipment such as switches, routers, or industrial controllers to fiber optic or copper cabling. Its primary function is signal conversion, transforming electrical signals from network devices into optical signals for fiber transmission, or vice versa for copper links, enabling reliable data transfer at 1 gigabit per second rates .

Types and Applications

- Fiber-based 1G SFPs
- Example: SO-SFP-1G-O-Cxx-E from Smartoptics
- Supports OSC (Optical Supervisory Channel) and OTDR (Optical Time Domain Reflectometer) applications
- Operates at 100 Mbps and 1 Gbps Ethernet rates over distances up to 80 km
- Features automatic switching to OTDR mode upon link disruption to measure optical return loss and signal quality
- Available in multiple CWDM wavelengths and 1625 nm for compatibility with Smartoptics Open Line System products
- Copper-based 1G SFPs...
