

# Connection steps for the junction box

## Article Overview

To connect a junction box safely, turn off the power, strip and match wires by color, secure connections with wire nuts, ground properly, and ensure the box is accessible and not overfilled.

### Step 1: Safety First

Before starting, turn off the power at the main circuit breaker to prevent electric shock. Use a voltage tester to confirm that no wires are live before handling them . Wear rubber gloves and safety goggles to protect against accidental contact or stray wire fragments .

### Step 2: Choose the Right Junction Box

Select a box that matches your wiring method and environment. Plastic boxes are suitable for dry indoor locations, while metal boxes are preferred for conduit or areas requiring extra durability. Ensure the box is large enough to accommodate all wires, splices, and connectors without overcrowding, following the National Electrical Code for conductor fill volume .

### Step 3: Prepare the Wires

Strip about 3/4 inch (19 mm) of insulation from the ends of each wire using wire strippers. Separate wires by function: black (hot), white (neutral), and green or bare copper (ground). If multiple wires need to connect to a single terminal, create pigtails by twisting them together before securing with a wire nut ....
