

Construction site elevator distribution box installation price

Article Overview

Elevator distribution box installation typically adds \$2,000-\$10,000 to the total elevator project cost, depending on system type, building complexity, and labor requirements.

Cost Overview

The distribution box is a critical component of an elevator's electrical and control system, housing circuit breakers, relays, and controllers that manage elevator operation. Its installation cost is influenced by:

- Elevator type: Hydraulic, traction, or machine-room-less (MRL) systems require different control configurations, with MRL and gearless traction systems generally demanding more sophisticated distribution boxes .
- Building complexity: Multi-story commercial buildings with multiple stops, larger cab sizes, or high-speed elevators require larger or more advanced distribution panels .
- Labor and installation: Installation involves mounting the box, wiring to the elevator motor, safety systems, and building power supply. Labor hours can range from 20-80 hours depending on site access and complexity, with typical rates of \$100-\$180 per hour in urban areas .
- Permits and compliance: Electrical permits, inspections, and code compliance add \$500-\$2,500 to the cost, depending on local regulations
