

Construction site power distribution box cable specifications and models

Overview

British standard BS5467 (PVC) and BS6724 (LSZH) offer mechanical protection whilst rubber cables such as the H07ZZ-F (LSZH) and H07RN-F offer flexibility for more complex installation conditions. Xtrem® H07RN-F rubber cables are designed to supply power to low voltage appliances including electric motors and submersible pumps in deep water installations, as well as many other electrical equipment. Projects across the spectrum of public, commercial and industrial buildings, and large-scale domestic dwelling plots, have requirements for connections to the electrical grid, fixed wiring, fire suppression and fire alarm systems, BMS systems for climate and lighting control, as well as fixtures. PCE power distribution units are valuable helpers for construction, trade and industry. All devices are subjected to strict quality control and are designed to be extremely user-friendly. In addition to a wide range of standard products, we are of course able to manufacture special designs. The Trystar Tuff Box sets the standard for rugged, portable power solutions, delivering unmatched durability, reliability, and customization for the events & entertainment, utility, and construction markets while minimizing maintenance costs and downtime.
