

Cooperative busbar trunking price

Article Overview

The price of busbar trunking systems varies widely, typically influenced by material, current rating, system type, customization, and installation complexity.

Price Factors

- **Material:** Copper busbars are more expensive than aluminum due to higher conductivity and durability, while aluminum offers a cost-effective, lighter alternative .
- **System Type:** Air-insulated busbar trunking is generally lower in cost and easier to maintain, whereas sandwich-type systems provide higher current density and compactness but at a higher price .
- **Current Rating:** Systems range from 25 A for lighting trunking up to 6300 A for high-current feeders. Higher current ratings require larger cross-sections and more material, increasing cost .
- **Customization:** Custom designs with additional tap-off points, bends, or joints increase labor and material costs. Standard prefabricated systems are cheaper but may be less flexible .
- **Accessories:** Tap-off units with MCCBs, meters, or surge protection devices add to the overall price .
- **Bulk Purchasing and Logistics:** Buying in bulk can reduce per-unit costs, but freight, import duties, and local supplier pricing affect the final cost .

Approximate Price Ranges

- **Low-voltage aluminum busbar trunking:** Typically starts from a few tens of dollars per meter for basic lighting or small feeder systems
