

Detailed parameters of network rack

Article Overview

Network racks are standardized frameworks designed to house networking and server equipment, with specifications covering height, width, depth, material, weight capacity, and ventilation.

Rack Units and Dimensions

- Rack Unit (U): Standard vertical measurement is 1.75 inches (44.45 mm) per unit ().
- Typical Heights: Common configurations include 42U, 45U, 48 inches, or 83 inches, depending on equipment density ().
- Width: Standard mounting width is 19 inches (48.3 cm), with overall rack widths ranging 600–800 mm to accommodate cable management and airflow ().
- Depth: Varies from 600 mm to 1200 mm or more, with tolerances as tight as ± 0.2 mm for precise equipment alignment ().

Structural and Material Specifications

- Material Thickness: Side panels, mounting rails, and reinforcement brackets typically range 1.5–2.5 mm, with thicker materials providing higher durability for heavy loads ().
- Frame Construction: Pre-configured racks often use torsionally stiff welded frames with vertical and horizontal members, integral system holes on a 25 mm DIN pitch, and chamfered edges for safety ().
- Doors: Front and rear doors may be vented or perforated, with perforation patterns providing 60–85% open area for airflow (). Roofs and floors may also be perforated...
