

Distribution Box with Spreading Leaves

Article Overview

A distribution box with spreading leaves is a modular or branching enclosure that allows multiple cable connections to be distributed safely and efficiently, often in indoor or outdoor environments.

Overview

A distribution box with spreading leaves is designed to branch, switch, and protect electrical or signal connections. The "spreading leaves" concept refers to the internal arrangement that allows multiple cables or circuits to diverge from a central point, providing organized and secure distribution for power, signals, or data . These boxes are commonly used in industrial, utility, and residential applications.

Key Features

- **Modular Design:** Many distribution boxes feature modular enclosures that can be customized for the number of connections, voltage levels, and cable sizes .
- **Weatherproof and Durable:** Outdoor versions are fully sealed to resist rain, dust, and harsh environmental conditions, often rated up to IP67 .
- **Material Options:** Enclosures are typically made from high-strength ABS, polycarbonate, or metal, providing impact resistance and long-term durability .
- **Easy Installation:** Some models include hinged quick-release catches, DIN rail mounting, or clip-together designs for tool-free assembly .
- **Flexible Connectivity:** Supports a range of cable sizes (0.5–10 mm²) and connection types, including pluggable insulation displacement or PUSH-IN contacts
