

Distribution box is surface-mounted

Overview

Surface mounted distribution boards are installed directly onto wall surfaces, protruding from the mounting surface. This installation method offers several advantages including simplified installation procedures, enhanced accessibility for maintenance, and easier cable management. In our shop you will not only receive components for safe and modern electrical installation and sub-distribution. However, during the project phase or a renovation, the most frequent question arises: Should I choose a flush mount or a surface mount distribution box?

In this guide, we will examine the advantages of both solutions and the critical technical details you need to consider when choosing the right. Fuse boxes are an important part of the house electrics, especially in modern architecture and today's Smart Home functions, which is why we offer the DISBOX-T series, a surface-mounted distribution box that meets the highest design requirements. Distribution boxes, meanwhile, are enclosures. Excellent material: the IP65 junction box is made of excellent ABS material with smooth edges, has good sealing performance with long service life, strong flame resistance, good insulation, corrosion resistance, no worry that the wires are exposed to the wind and rain.
