

Distribution box with 14 circuit breakers

Article Overview

A 14-circuit breaker distribution box is an electrical panel designed to safely distribute power to up to 14 individual circuits, providing overload and short-circuit protection.

Overview

A 14-circuit breaker distribution box, also known as a load center or DB box, serves as the central hub for electrical power distribution in homes, offices, or light industrial settings. It receives power from the main supply and divides it into multiple circuits, each protected by a circuit breaker to prevent overloads and short circuits .

Key Components

- **Main Switch or Main Breaker:** Controls the entire electrical supply to the panel and allows complete power shutdown during maintenance .
- **Circuit Breakers:** Individual switches that protect each circuit from overcurrent; can be single-pole (120V) or double-pole (240V) depending on the load .
- **Bus Bars:** Metal strips that distribute electricity from the main breaker to individual circuits .
- **Neutral and Ground Bars:** Provide return paths and grounding for safety .
- **Enclosure:** Durable casing made from steel or reinforced plastic, protecting internal components from dust, moisture, and physical damage .
