

Do I need to buy a router to subscribe to fiber optic broadband

Article Overview

You don't necessarily need to buy a new router for fiber optic broadband, but using a compatible, high-speed router ensures you can fully utilize your fiber connection.

Understanding Fiber Internet Equipment

Fiber optic broadband requires an Optical Network Terminal (ONT), which converts the fiber-optic light signals into an Ethernet connection that your router can use . Unlike cable or DSL, fiber does not require a traditional modem, so the ONT replaces that function entirely . Your internet service provider (ISP) typically installs the ONT and may provide a compatible router as part of the setup .

Using Your Existing Router

You can often use your existing router with fiber internet if it has a Gigabit Ethernet WAN port and supports the speeds of your plan . Routers designed for DSL or cable may not be compatible or may limit your speeds, especially if your fiber plan exceeds 500 Mbps . Older Wi-Fi 4 or Wi-Fi 5 routers may also bottleneck performance, so upgrading to a Wi-Fi 6 or 6E router is recommended for optimal speed, efficiency, and device management .

When to Consider Buying a New Router
