

Eth power distribution box

Article Overview

EtherCAT power distribution boxes manage and protect multiple 24 V DC power branches in industrial automation systems, offering monitoring, overcurrent protection, and modular connectivity.

Overview

EtherCAT power distribution boxes are specialized modules designed to distribute and manage power for EtherCAT-connected devices in industrial automation. They allow multiple outputs to be supplied from a single input while providing overcurrent protection, monitoring, and diagnostic capabilities. These boxes are essential for ensuring reliable operation of control systems, servo drives, sensors, and other peripherals in networked environments.

Key Features

EP9224-0023 EtherCAT Box:

- Connects four 24 V power supply branches with independent monitoring of control voltage (U_S) and peripheral voltage (U_P) for each branch.
- Electronic overcurrent protection automatically switches off affected outputs in case of short circuits, while keeping other branches active.
- Input voltage is maintained above 21 V during faults or startup, allowing high-capacity consumers to be added without issues.
- Diagnostic data, including current and voltage values, can be read via the EtherCAT interface, enabling precise error localization....
