

Ethiopia has a long history of selling its spectrometer factory

Article Overview

Ethiopia has pursued industrialization and selective privatization, but there is no verified record of a spectrometer factory being sold.

Ethiopia has a long history of attempting to develop its industrial sector, particularly since the early 2000s, when the government adopted an active industrial policy aimed at structural transformation and export-oriented manufacturing (AfDB report). The country has focused on sectors like textiles, leather, and electronics, with mixed success due to structural weaknesses, political economy factors, and limited infrastructure .

Industrial Policy and Privatization Efforts

The Ethiopian government has historically maintained state ownership of key industries while gradually exploring privatization. For example, in recent years, Ethiopia attempted to partially privatize state-owned enterprises such as Ethio Telecom and considered selling shares in other sectors through the Ethiopian Stock Exchange, but faced limited investor interest and challenges in attracting foreign capital . These efforts reflect a broader strategy to liberalize the economy while retaining control over strategic industries.

Challenges in Industrial Development

Ethiopia's industrialization has been constrained by several factors:...
