

Even fiber optic installation requires a router

Overview

For a fiber optic connection, you need an optical network terminal (ONT), a router, and appropriate Ethernet connections for wired devices. Your service provider typically supplies the ONT, but you may need to purchase enterprise-grade routers and switches for business. This guide walks you through the complete fiber installation process, from checking availability to optimizing your Wi-Fi network performance. Larger properties or complex wiring may extend the timeline, but in most cases, you'll be online the same day. Do I need to prepare my home for installing fiber optic cable?

Yes. Clear access points like driveways, yards, and walls. Fiber optic internet is generally installed in the following 5 steps, which we'll dive deeper into throughout the article: A technician checks your area and prepares the connection from the neighborhood fiber network. Most modern routers are capable of handling fiber optic internet speeds, but they. Fiber optic internet demands specific hardware, but do you truly need a special router?

This guide clarifies the requirements for optimal performance, explaining what your existing router can handle and when an upgrade is essential for unlocking the full potential of your blazing-fast fiber.
