

FC Interface Mode

Overview

The `interface fc` command displays the Fibre Channel (FC) interface view. Specifies the number of an FC interface. Fibre Channel is primarily used to connect computer data storage to servers in storage area networks (SAN) in commercial data centers. Fibre Channel networks form a. Fibre Channel over Ethernet (FCoE) transports FC over Ethernet. Each interface has an associated administrative configuration and an operational status: The administrative. Support for FC or FCoE depends on the Junos OS release in your installation. Format for the locally unique MAC address the FC switch assigns to FCoE devices for FCoE transactions after FIP establishes a connection between an FCoE device and the FC switch.
