

Fiber Fiber Reel 24-Core Single Mode SC

Article Overview

A 24-core single-mode SC fiber optic cable on a reel is designed for high-speed, long-distance optical communication, suitable for outdoor, tactical, and large-scale deployments.

Overview

A 24-core single-mode SC fiber cable contains 24 individual optical fibers, each capable of transmitting data over long distances with minimal signal loss. These fibers typically conform to G.652D standards, ensuring low attenuation and high signal integrity for telecom, broadband, and enterprise networks. The SC connectors provide a reliable, push-pull interface for easy installation and maintenance.

Construction and Features

- **Outdoor and Armored Design:** Many 24-core cables, such as the HAILE HT210-24SC, feature a stranded GYTS structure with armored layers to protect against physical stress, moisture, and rodent damage.
- **Tactical Flexibility:** Tactical versions, like the Camplex HF-TR24SC, use tight-buffered fibers with aramid strength members and a polyurethane sheath to resist crushing and high-traffic handling, suitable for field production or outside broadcast environments.
- **Mechanical Strength:** These cables are designed with high tensile strength (up to 800N in some fanout assemblies) and crush resistance to maintain fiber integrity during installation and operation.
- **Water and Rodent Protection:** Outdoor cables often include water-blocking materi...
