

Fiber Optic Audio Network Panel

Article Overview

A Fiber Optic Audio Network Panel is a structured cabling component that terminates, organizes, and distributes fiber optic cables for high-quality audio and AV signal transmission.

Overview

A fiber optic audio network panel serves as a central termination and distribution point for fiber optic cables in professional audio, video, and control systems. It allows multiple audio sources and destinations to be connected efficiently, providing a secure, interference-free, and high-bandwidth pathway for digital audio signals over long distances .

Key Features

- **Connectors and Compatibility:** Panels typically support LC, SC, MTP/MPO connectors and can handle singlemode or multimode fibers .
- **High-Density Options:** Many panels, such as FHD® FAPs or FHU® 1U panels, are designed for medium to high-density installations, accommodating dozens to hundreds of fibers .
- **Modular Design:** Some panels allow interchangeable modules, adapter packs, or splice trays, enabling flexible configurations and easy upgrades .
- **Durability and Compliance:** Panels are built to withstand handling and pulling during installation and comply with building and safety codes .
