

Fiber Optic Cable Detection in Switzerland

Article Overview

Fiber optic availability in Switzerland can be checked using interactive maps, provider tools, and official coverage data, with FTTH coverage reaching around 55-57% of households and expanding continuously.

Checking Fiber Optic Availability

To determine if a property is connected or can be connected to a fiber optic network, you can use several methods:

- **Interactive Maps:** The Swiss Broadband Atlas provides detailed maps showing fixed network coverage, including fiber, copper, and coaxial connections. Coverage is displayed in 250x250 meter grids, updated twice a year, and reflects residential and business buildings only .
- **Provider Tools:** Major providers like Swisscom, Sunrise, Wingo, Yallo, and Salt offer online availability checks. By entering your address, you can see if FTTH (Fiber to the Home) or other fiber types are available .
- **Coverage Maps:** Websites like internet-offer.ch allow you to view FTTH coverage by color-coded grids, showing the percentage of buildings in a given area connected to fiber .

Types of Fiber Connections

- **FTTH (Fiber to the Home):** Fiber runs directly into the home, offering maximum sp...
