

Fiber optic cable connected to switch but no internet connection

Article Overview

Even if a fiber link shows as active, internet issues can stem from SFP mismatches, switch faults, or configuration problems.

Check Physical and Hardware Components

Even with link lights on, the fiber connection may have subtle issues. Inspect the fiber cables for bends, cuts, or dirty connectors and clean them with lint-free wipes and isopropyl alcohol if needed . Ensure that the SFP transceivers are compatible with both switches; mismatched or third-party SFPs can cause link issues despite the light being on . Swapping SFPs with known-good units can help isolate the problem .

Verify Switch and Router Functionality

- Restart both switches to clear temporary glitches .
- If using unmanaged switches, test connectivity by assigning a static IP to a device on the remote switch and attempt to ping the router. If the ping fails, the issue may be between the switches or with the upstream router .
- Check for duplicate IPs or DHCP exhaustion on the router; even if other devices work, the remote switch may be affected by DHCP allocation issues .

Test Network Path

- Connect a computer directly to the remote switch with a static IP and try pinging...
