

Fiber optic internet connection is lagging when using a router

Article Overview

Lagging fiber connections are often caused by router issues, cable problems, or network configuration rather than the fiber line itself.

Check Your Internet Speed

Start by running a speed test using a reputable website or app. Connect your device directly to the router with an Ethernet cable and close all other applications to get accurate results. Compare the measured speeds with your plan's advertised speeds to determine if the issue is with the fiber service or your home network .

Restart Your Router

A simple reboot can resolve temporary glitches. Unplug your router, wait about 60 seconds, then plug it back in and allow it to fully restart. Test your connection again to see if performance improves .

Inspect Hardware and Connections

- Cables: Check fiber and Ethernet cables for damage, fraying, or loose connections. Replace any compromised cables and ensure you are using at least Cat6 Ethernet cables for gigabit speeds .
- Connectors: Clean fiber connectors with lint-free wipes and isopropyl alcohol to remove dust or oil
