

Franchise Cold Passage Waterproof Type

Article Overview

Waterproofing for cold passages or cross-passages typically involves specialized systems designed to prevent water ingress, protect structural concrete, and maintain long-term durability in cold or underground environments.

Waterproofing in Cross-Passage and Cold Environments

Cross-passages in tunnels or cold storage facilities require continuous waterproofing to ensure safety and prevent structural damage. These areas often contain maintenance equipment, escape routes, or cold storage access points, making waterproofing critical for both operational and safety reasons .

Types of Waterproofing Systems

- Drained Tunnel (Umbrella) Systems
 - Uses a waterproofing layer to protect structural concrete.
 - Water is directed into drainage pipes along the tunnel sides.
 - Suitable for areas where water ingress is expected but can be managed via drainage .
- Pressurized Tunnel Systems
 - Designed for tunnels under high water pressure.
 - Waterproofing layers are applied to resist hydrostatic pressure and prevent seepage .
- Cross-Passage Waterproofing
 - Requires continuous membranes or injection systems to seal joints and interfaces...
