

German Intelligent Electronic Patch Panel Manufacturer

Article Overview

Leading German manufacturers of intelligent electronic patch panels include EFB-Elektronik and FUTURE-PATCH, offering advanced solutions for real-time network monitoring and management.

Key Manufacturers

EFB-Elektronik is a prominent German company providing high-quality patch panels in standard 10" and 19" formats, with multiple port configurations and both shielded (STP) and unshielded (UTP) options. Their products are designed for professional network environments, supporting Cat.5e, Cat.6, and Cat.6A standards, and are suitable for rack-mounted cabinets, wall housings, and DIN rail installations. EFB-Elektronik also offers customizable Keystone modules and technical support for enterprise-grade and high-demand private applications. FUTURE-PATCH specializes in intelligent patching systems with integrated electronics for real-time monitoring. Their second-generation systems include a Panel Control Unit (PCU) and intelligent patch cords with RFID transponders. The system automatically detects cable connections, updates the DCIM software, and sends alerts for unauthorized changes. This ensures accurate documentation of all moves, adds, and changes, minimizing errors and reducing network downtime. FUTURE-PATCH solutions are designed for data centers and enterprise networks requiring high reliability and fail-safe operation.
