

# How many indicator lights should a fiber optic router normally have

## Article Overview

A typical fiber optic router usually has 4 to 5 main indicator lights, each representing a key function such as power, network connection, and Wi-Fi activity.

### Common LED Indicators

- **Power (POWER):** This light shows whether the router is receiving power. Normally, it should be solid. If it is off, the router may not be powered or the power supply could be faulty .
- **Passive Optical Network (PON):** Indicates the status of the fiber connection. A solid light means the optical signal is normal, while blinking may indicate abnormal signal levels .
- **Loss of Signal (LOS):** Normally off. If it lights up or blinks red, it signals a fiber disconnection, dirty connector, or other physical issues with the fiber line .
- **LAN (Ethernet ports):** Flickers when a device is connected and transmitting data. If off, no device is connected or the cable/port may be faulty .
- **WLAN / Wi-Fi:** Shows wireless activity. Flickering indicates data transmission over Wi-Fi, while off means Wi-Fi is disabled .

### Additional Notes

- Some routers may include extra lights for Internet/WAN, USB ports, or VoIP services depending on the model .
- Solid green or white lights generally indicate normal operation, while red or amber lights indicate errors or warnings ....
