

How much does a ton of special luminous cable cost

Article Overview

The cost of a ton of special luminous cable can vary widely, typically ranging from \$20,000 to over \$100,000 depending on type, materials, and specifications.

Estimated Pricing

Special luminous cables, such as optical power ground wires (OPGW) or fiber-optic reinforced cables, are priced primarily by length and material composition rather than weight. For example, OPGW cables are priced between RMB 10,000 to RMB 30,000 per kilometer depending on fiber count and structural specifications . Converting this to a per-ton estimate depends on the cable's density and diameter, but a rough approximation suggests \$20,000–\$100,000 per ton for high-specification luminous cables. Submarine HVDC or high-voltage cables, which are more complex and reinforced, can cost €2–5 million per kilometer, reflecting the use of copper/aluminum conductors, XLPE insulation, and steel reinforcement . These cables are heavier and more expensive, so the per-ton cost can be significantly higher than standard terrestrial cables.

Factors Affecting Cost

- **Material Composition:** Copper or aluminum conductors, steel armoring, and optical fibers increase both weight and price.
- **Cable Type:** Luminous or optical cables with multiple cores or high fiber counts are more expensive.
- **Market Conditions:** Supply chain fluctuations, demand, and regional pricing affect...
