

How much does it cost to install a distribution box by slotting

Article Overview

Installing a distribution box by slotting typically costs between \$1,100 and \$3,000, depending on box type, amperage, labor, and installation complexity.

Cost Breakdown

Materials: The price of a standard residential distribution box ranges from \$250 to \$600 for basic indoor units, while larger or weatherproof boxes can cost \$700–\$1,500 or more depending on amperage and features . Slotting may require additional materials such as conduits, mounting hardware, and protective covers. **Labor:** Electricians typically charge \$75–\$150 per hour, and a slotting installation can take 4–12 hours depending on wall access, wiring complexity, and whether a new panel or feeder lines are needed . Labor costs can therefore range from \$300 to \$1,800. **Permits and Inspections:** Local electrical codes often require permits, which can add \$100–\$300 to the total project cost . **Additional Factors:** Costs increase if structural modifications are needed for slotting, if the wiring is old or difficult to access, or if safety upgrades like AFCI/GFCI protection are included . Outdoor installations or high-amperage panels (200A) can push total costs toward \$3,000–\$6,000 .

Typical Scenarios

- Basic Installation: 100A indoor panel, standard slotting, minimal rewiring. Total: \$1,100–\$1,600 .
- Mid-Range Upgrade: 150A panel, some conductor replacements, moderate slottin...
