

How should the electrical distribution box on the terrace be configured

Article Overview

For a terrace installation, the distribution box should be weatherproof, properly grounded, and organized with clear circuit protection and wiring layout.

Enclosure Selection

Choose a weatherproof distribution box with a high IP rating (e.g., IP65) to protect against rain, dust, and UV exposure. Materials like steel or UV-resistant plastic are recommended for durability in outdoor conditions. Ensure the box is mounted securely on a stable surface, at a height of around 1.5 meters, and in a location that is dry, ventilated, and easily accessible for maintenance .

Internal Configuration

Inside the box, include the following components:

- Main switch or isolator to control the incoming supply.
- Circuit breakers (MCBs) for each outgoing circuit.
- Residual Current Devices (RCDs or RCCBs) for personal protection against leakage currents.
- Surge Protective Devices (SPDs) to guard against voltage spikes.
- Neutral and earth bars for organized connections.
- DIN rails for mounting modular devices . Arrange the breakers from left to right, leaving reserved space for future expansion. Ensure neat cable management with z...
