

How to connect a fiber optic cable to a coupler

Article Overview

To connect a fiber optic cable to a coupler, clean the connectors, align them with the adapter ports, insert each connector securely, and verify the connection for minimal signal loss.

Step 1: Prepare the Fiber Optic Connectors

Before connecting, ensure that the fiber optic connectors are clean and free of dust or debris, as contamination can cause signal loss or damage the fiber. Use lint-free wipes and isopropyl alcohol to clean the ferrule end faces of the connectors. Inspect the fiber for any cracks or damage and avoid bending or twisting the cable excessively.

Step 2: Identify the Coupler Type

Choose the correct fiber optic coupler (adapter) based on your connector types:

- Simplex: connects a single fiber (one-way transmission)
- Duplex: connects two fibers for bi-directional communication
- Hybrid: allows different connector types to mate, e.g., LC to SC. Ensure the coupler matches the connector type and mode (single-mode or multi-mode) to maintain low insertion loss.

Step 3: Insert the First Connector...
