

How to connect the ground wire of the distribution box to the house

Article Overview

Adding a ground wire to your home distribution box ensures electrical safety by providing a low-resistance path for stray current to the earth.

Step 1: Identify the Grounding Bar

Open your distribution box and locate the grounding bar (PE bar), usually marked with "PE" or a green color. This is the terminal where all ground wires converge and connect to the main grounding system of your home .

Step 2: Select the Correct Ground Wire

Use a copper wire with green or bare insulation, sized according to the circuit it will protect. For most residential circuits, a #12 AWG wire is standard, but larger circuits may require thicker wire . Ensure the wire is long enough to reach from the distribution box to the grounding electrode.

Step 3: Connect the Ground Wire

- Strip the insulation from the end of the wire to expose the copper.
- Attach the wire securely to the grounding bar using the provided screw or terminal. Tighten firmly to prevent loosening .
- If grounding multiple components, use a crimp connector or twist-on wire nut to join all ground wires before connecting to the bar
