

How to connect the incoming line to the primary distribution box

Article Overview

To connect the incoming line to a primary distribution box, attach the live (phase) wires to the main terminals, connect the neutral to the neutral busbar, and link the ground wire to the earth busbar, ensuring all connections are secure and properly insulated.

Step-by-Step Connection Process

1. Safety First Before starting, ensure the main power supply is completely turned off to prevent electrical shock. Use insulated tools and wear protective equipment during installation . 2. Mount the Distribution Box Secure the distribution box to a wall at an accessible height, ensuring the installation site is free of obstructions . 3. Identify Incoming Wires The incoming line typically consists of:

- Phase wires (A, B, C): Carry the main current, usually color-coded yellow (A), green (B), and red (C) for three-phase systems .
 - Neutral wire (N): Returns current, usually blue .
 - Ground wire (PE): Safety wire, yellow-green striped .
4. Connect the Live (Phase) Wires Attach each phase wire to the corresponding main terminal or the line terminal of the main circuit breaker. For single-phase setups, connect the live wire to the breaker's line terminal . 5. Connect the Neutral Wire For single-pole breakers, the neutral bypasses the breaker and connects directly to the neutral busbar. For double-pole breakers, both live and neutral wires are connected to the designated terminals . 6. Connect the Ground Wire Attach the protective earth wire to the ground busbar i...
