

How to connect the main cable of the optical distribution box

Article Overview

To connect the main cable to an optical distribution box, you need to introduce the cable through the inlet, secure it with seals and grommets, prepare the fibers, and splice them to pigtails or adapters.

Step-by-Step Procedure

1. Prepare the Main Cable

- Select the appropriate cable seals and grommets based on the diameter of the main fiber optic cable ().
 - Pass the main cable through the inlet port of the distribution box, usually the center port, and through the selected grommet to ensure a secure fit ().
 - Use hose clamps or cable fixing devices to prevent the cable from moving or loosening inside the box ().
- #### 2. Strip and Expose Fibers
- Remove the outer sheath and protective layers of the main cable to expose the bare optical fibers ().
 - Carefully handle the fibers to avoid bending beyond the minimum bend radius, which can cause signal loss ().
- #### 3. Secure the Fibers
- Use nylon tie-wraps or other securing devices to fix the fibers in place within the fiber tray or splice module ().
 - Ensure that the fibers have enough slack to allow the front panel of the distribution box to be pulled out without tension ().
- #### 4. Splice or Connect to Pigtails
- Perform fusion splicing between the main cable fibers and pre-terminated pigtails...
